

T Floor[®] Spacers

for any Floating Floor Installation

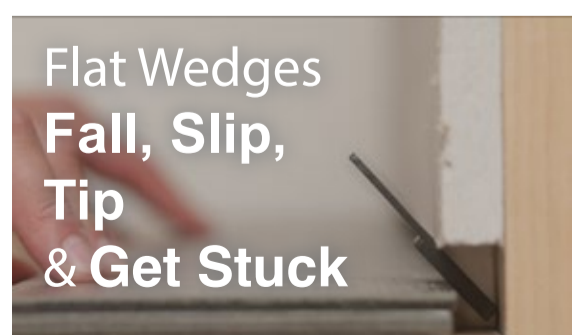

- Laminate
- Vinyl Plank
- Engineered Wood
- Bamboo
- LVT
- SubFloor Panels

Never Fall, Slip, Tip Over, or Get Stuck

With their patented T-shape design, T Floor Spacers always stay in place, maintaining a consistent gap for expansion.

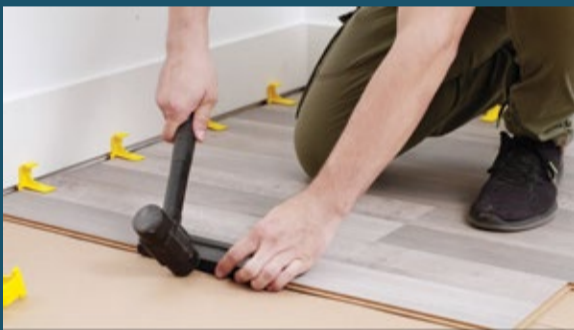

Unlike flat wedge spacers that fall, slip, tip over and get stuck; the T Floor Spacers keep the flooring straight and solid throughout the installation.

Install ANY Floating Flooring Material

TFloor Spacers can be used to install any floating flooring material which requires an expansion gap of 1/4"- 3/8."

**Even when tapping against it
TFloor Spacers hold firm
under pressure.**

**And when you are finished
they are easy to remove.**

12 spacers are included with every package, covering an area of up to 500 ft². Two to three packages are recommended for medium and large installations.

Customer Reviews

★★★★★ **Best Laminate Accessory Around!!**

They worked great kept the floor from moving and it will for sure move when trying to snap floor together. There is no way to keep the floor straight on the wall if you don't use these we tried at first then I remembered reading about these ordered.

★★★★★ **Huge Time Saver**

Excellent product. Makes the whole installation way easier. Saves time and totaly worth the money.

★★★★★ **The Best**

Very easy to use. Good multi-function tool. Worth the extra.

★★★★★ **Don't try putting floor in unless you use the TFLOOR SPACERS #1**

They worked great kept the floor from moving and it will for sure move when trying to snap floor together. There is no way to keep the floor straight on the wall if you don't use these we tried at first then I remembered reading about these ordered.

★★★★★ **Better than the triangle spacers**

Working good for our purposes. Helps prevent flooring waist.

★★★★★ **Great design!**

These spacers made it SO much easier. I won't consider doing an installation again without these. High quality material.

★★★★★ These work all the time

As a flooring contractor of over 25 years, these are some of the best spacers available. Very durable and work perfectly, where a lot of the “box store” spacers just don’t cut it in the real world. A lot of times the sheet rock is too high.

★★★★★ Well worth the its price (\$19.95)

You guys nailed it with this design. Simple, effective, and easily replaceable. Sharing the same qualities as the perfect employee. Thank you for making my job easier!!

★★★★★ Awesome Laminate Spacers

These work so much better than the little rectangular ones that have been sold at HD for 25 years. They bite better and are easier to lift. Can smack down if you need to. If you want to save money thats cool. But these are really, really nice.

★★★★★ Extremely Helpful

These spacers are exactly what we needed to hold our floating floor. Spacers that come with the installation kit we bought with the flooring were totaly useless. The Tfloor spacers held up nicely, provided most importantly HELD the separation space we needed along the walls.

★★★★★ Excellent spacers when the wall doesn't touch the floor

These spacers are excellent. They work as advertised. Sadly, I found them when I was doing the last room of my house. I will pass them on to a buddy. They will live on. Oh, if you have a large room, get 2 packages. Don't be cheap. Money well spent.
